CULTURE CARE OF *Calceolaria*

GOLDEN NUGGET

A new introduction perennial *Calceolaria* that has been tested and proved more than satisfactory is *Calceolaria* "GOLDEN NUGGET".

This plant has withstood Colorado river water, California heat, and the plants haven't suffered from the smog.

It is a stocky, vigorous, profusely blooming plant that grows in either sun or shade. The pouch-like vivid lemon yellow flowers, in clusters containing from 25 to 30 individual blooms, cover the plants from May through September.

In full sun "GOLDEN NUGGET" grows up to 2 feet tall and spreads about the same size. In shade or partial shade it grows sprawly and forms a colorfully attractive ground cover during the summer, besides being a restful green in the winter.

This new *Calceolaria* "Purse Plant" is an attractive addition to your perennial flower bed, because the vivid yellow blossoms form a delightful color contrast when planted among or near *Aster Frikarti*, *Statice Perezic*, *Blue Triumph Verbenas* or any flowering plants.

It makes an ideal flowering potted plant, too. However, in shade the plant grows loosely, the branches gracefully arch and cascade.

CULTURE

Planting — "GOLDEN NUGGET" *Calceolaria* are one of the easiest to grow. Plant them in an enriched soil for best blooms.

Feeding — Fertilize the plants approximately every four to six weeks throughout the summer.

Watering — Potted *Calceolarias* can stand dryness occasionally. In soil, water same as you would any other perennial plants.

Pest Control — So far, aphids are the only pests found on "GOLDEN NUGGET" *Calceolaria*. Aphids can easily be controlled by insecticide sprays or insecticide dust.

Ask your nurseryman for the GOLDEN NUGGET *Calceolaria*
